

Funded accounts: how many pips did we leave behind?

For each closed trade on **The5ers Funded** and **The5ers Funded 10k**, this compares your exit price against the **best price gold reached in your favor** within 2 hours afterward — most recent trade first. `signal_forge Demo` and `Smart Money` are excluded.

TRADES REVIEWED	AVG. CAPTURED (WINNERS)	AVG. LEFT ON THE TABLE	AVG. \$ LEFT ON THE TABLE
16	1.81	8.24	\$13.62
14 winners · 2 stopped out	pips per winning trade	pips per winning trade	per winning trade, at real lot size

On the two funded accounts, winning trades captured roughly **18%** of the move that was actually available — exiting at an average of **+1.81 pips** when price kept running to an average of **+10.04 pips** within the following 2 hours. At each trade’s real lot size, that gap works out to about **\$13.62 missed per winning trade** — **\$190.67 total** across these 16 trades.

“Best available” is the highest favorable price XAUUSD reached in the 2 hours after each trade closed, read from real M5 candles on the trading VPS — not a projection. Pip values are plain XAUUSD price-point differences, matching this bot’s own tp/sl convention. “\$ Missed” uses each trade’s actual lot size and XAUUSD’s real tick value (\$100 per point per 1.0 lot on these accounts), not an estimate from the P/L column.

The 2 stop-loss trades (2026-08-18 17:32, both accounts) are excluded from the “captured” and “\$ missed” averages above — those closed as designed on a losing move, not early on a winning one, so blending them in would understate how much winners are being cut short. Both funded accounts trade the same signal_forge strategy in lockstep, so most rows appear in matching pairs a few seconds apart.
